

## **EUCA STUMP SPROUTING HEAD CONCEPT** **Advanced Mechanized Regrowth Management System**

**Innovation of special Euca stumps clearing head (based on our StemMaster) utilizing observations and discussions during the field trips in Latin countries realize an alternative silvicultural method for preparing and planting a new (euca) tree sapling**

**There is under construction a future clearing head, mounted on small off-road vehicle like excavator or payloader or forest machine suitable working at the forest site. Some kind of biome is needs as well.**

**The design of the new euca regrowth (sprouting) stem cutter product family is totally new and it's still in concept level to be adapted it in different conditions and specific needs, but it's very realistic to make based on our experience of patented (pend) StemMaster continuously collection biomass and fuel management heads.**

**Related the control systems, we have lots of experience from harvester heads and the latest new knowledge about the control system is suitable for PalmMaster palm tree harvester head innovation, in which we could utilize camera and AI- technology and this similar know-how ideas could be transferred to this system including identification.**

## CONTACT INFORMATION

**Mr. Turkka Lastunen, CEO and entrepreneur**

**Tel. + 358 44 513 3615**
